FREE GUIDE · CLAUDE + HIGGSFIELD

STOP WASTING HIGGSFIELD CREDITS

How I use Claude to write Seedance 2.5 prompts that look like real ads, the first time. Copy-paste templates, the 4 rules, the exact settings and the mistakes that burn credits.

🎁 **50% off Higgsfield** with my link:

What's inside

- **1.** Why your credits disappear
- **2.** The workflow: product photo → Claude → Higgsfield
- **3.** The master prompt to paste into Claude
- **4.** The 6-block structure every video prompt needs
- **5.** The 4 rules that make AI ads look real
- **6.** A full real example (the corduroy cap ad)
- **7.** Settings and credit costs
- **8.** Checklist before you press Generate

1. Why your credits disappear

Seedance 2.5 does exactly what you write, and fills every gap with a guess. A vague prompt means the model guesses the motion, the order of events and even your product. Every wrong guess is a generation you pay for.

What you write	What you get
"A cap with cool camera moves"	Random moves, a product that changes shape, a static ending
"A needle embroiders the logo"	The needle sewing over a logo that is already finished
"The cap rests on the table at the end"	2-3 seconds of a frozen frame
Product name or logo text in the prompt	Misspelled, melted letters

2. The workflow

1 **Product photo.** One clean, sharp photo. If it's small or blurry, recreate it first on Higgsfield with GPT Image 2.6 or Nano Banana Pro (about 2-3 credits).

2 **Claude writes the prompt.** Paste the master prompt (section 3) plus your photo into Claude. It returns a complete Seedance prompt.

3 **Higgsfield generates.** Seedance 2.5, Omni Reference, your photo as @image1, Draft 480p (about 30 credits for 10 seconds).

4 **Edit.** Watch it in slow motion, cut any frozen or broken frames, raise the volume, add music.

3. The master prompt for Claude

Open Claude, attach your product photo and paste this. Replace the parts in CAPITALS.

```
You are an expert prompt engineer for Seedance 2.5 (Omni Reference mode on Higgsfield). Write ONE complete video prompt for a 10-second, high-end product ad of the product in my attached photo.

Product: DESCRIBE YOUR PRODUCT (type, colour, material, key details).
Style / world: DESCRIBE THE MOOD (e.g. dark luxury studio, warm caramel backdrop, streetwear).
Audio: yes, sound design only, no voice.

Rules you must follow:
1. Use these blocks in this order: [REFERENCES], [HOOK RULE], [PHYSICS RULES], [MOTION RULES], [LOOK], [SHOT LIST], [SOUND].
2. [REFERENCES]: describe the product from the photo (@image1) in exact detail: shape, colour, material, every visible detail. End with "No redesign."
3. [HOOK RULE]: invent ONE physical metaphor based on the product's real shape (e.g. a cap visor with concentric stitching = a vinyl record). The first second must show it.
4. [PHYSICS RULES]: write the strict order in which things happen. Nothing appears from nowhere. Lock the product's colour and shape for the whole film. If something is being built, sewn or assembled, the finished result must NOT exist before it is made.
5. [MOTION RULES]: nothing is ever still. Camera AND product move in every shot. No shot longer than 0.6 seconds. Hard cuts on the beat, speed ramps. The film ends while the camera is still moving. Never use the words "settles", "rests" or "holds".
6. [LOOK]: real footage, not CGI. 35mm, macro lenses, fine grain, real imperfections.
7. [SHOT LIST]: timed second by second from 0.0s to 10.0s, 14-16 shots.
8. No readable text, letters or logos anywhere in the video.
9. No impossible magic transformations: show real craft, filmed like a trailer.
10. If a person appears, their eyes are never visible.

Give me only the final prompt in one code block, ready to paste. Then, in max 3 lines, tell me the riskiest moment in the prompt and how to fix it in editing if it fails.
```

4. The 6-block structure

Block	What it does	Why it saves credits
[REFERENCES]	Describes your product from @image1	The product doesn't change shape or colour
[HOOK RULE]	One physical metaphor in the first second	The opening stops the scroll
[PHYSICS RULES]	The order of events, what must not happen	No "impossible" frames to cut
[MOTION RULES]	Constant camera and product motion	No frozen, boring seconds
[SHOT LIST]	Every shot, timed to the tenth of a second	The model follows your edit, not its guess
[SOUND]	Sound design synced to the cuts	Half of the "wow" is the audio

Add **[LOOK]** for the visual style, and **[LOGO TIMING]** if a logo is being embroidered or printed on camera.

5. The 4 rules that make AI ads look real

Rule 1 · One physical metaphor

Find a real shape in your product that looks like something else. Cap visor = vinyl record. Necklace = musical scale. Watch movement = mechanical city. If people get it in half a second, they stop scrolling.

Rule 2 · Respect physics

Bad: "A needle embroiders the logo." → the model shows the finished logo and a needle going over it.

Good: "Ahead of the needle the fabric is bare; the thread appears only behind it. The needle never passes over finished stitching. The reference image shows the FINAL result only: before 1.8s the logo does not exist yet."

Rule 3 · Never static

Bad: "At the end the cap rests on the table."

Good: "A fast 180-degree orbit and push-in lands on the hero frame while the camera is still moving."

Rule 4 · Save your credits

- Generate 1 image, not 4.
- Always test in Draft 480p first.
- Upscale only the winner to 1080p, without regenerating.
- Fix small mistakes by cutting 0.3-0.5 seconds in editing instead of paying for a new generation.

6. Full real example: the corduroy cap ad

This is the prompt behind the cap ad on my page. Reference image: the cap photo as @image1.

```
[REFERENCES]
@image1 - the product, the styling and the editorial world. A six-panel cap in deep oxblood-burgundy wide-wale corduroy: thick plush vertical ridges, small stitched eyelets, a matching covered button at the crown, an antique-brass buckle strap at the back. A pre-curved burgundy corduroy visor bound with a cream twill edge, carrying concentric rows of cream topstitching like grooves on a record; a single cream chain-stitch flourish on the right side of the visor. Worn low by a young man in an oversized oatmeal-cream fleece hoodie, a thin silver chain, against a warm caramel-brown seamless. Reproduce the cap, colour, stitching, hoodie and caramel world exactly. The flourish is a SHAPE, never letters. Never show the model's eyes. No redesign.

[HOOK RULE - THE RECORD - MANDATORY]
The visor is a record. The film opens with the camera dropping onto the spinning visor like a stylus and riding the stitch rows inward, while a sewing needle lays the next cream row. Ahead of the needle the corduroy is bare; behind it the fresh thread appears stitch by stitch. Never show the needle over finished stitching. The rotation never slows.

[PHYSICS RULES - MANDATORY]
Everything happens in order. Nothing appears from nowhere. The cap stays burgundy corduroy with cream stitching for the whole film.

[MOTION RULES - MANDATORY]
Nothing is ever still. Every shot has camera motion AND product motion. No shot longer than 0.6 seconds. Hard cuts on every beat, rotation-matched cuts. The film ends in motion.

[LOOK]
Premium streetwear campaign on 35mm film: burgundy, cream and caramel against deep blacks, soft halation, fine grain, macro lenses, motion blur on every spin.

[SHOT LIST - 10 SECONDS]
0.0-0.5s - the cap spinning on a dark turntable, haze in the beam.
0.5-1.0s - snap zoom onto the visor: the needle drops like a stylus onto bare corduroy.
1.0-2.0s - macro ride along the rows; fresh cream stitches appear only behind the needle.
2.0-2.5s - punch down the spinning centre, rows blurring into rings.
2.5-3.0s - macro racing between the corduroy ridges.
3.0-3.5s - the flourish in extreme close-up.
3.5-4.0s - the brass buckle snapping shut.
4.0-4.5s - the covered button spinning, from above.
4.5-5.0s - fingertips flexing the visor edge.
5.0-5.7s - a hand flicks the cap off the pedestal, light-leak flash.
5.7-6.5s - caramel world: the cap spinning on a raised finger, its blur hiding the face.
6.5-7.2s - it flips onto his head in one move.
7.2-8.0s - he pulls the visor low, eyes hidden in its shadow.
8.0-8.6s - the silver chain catching the light.
8.6-10.0s - fast quarter orbit and push-in onto the hero frame, still moving.

[SOUND]
Vinyl needle drop and crackle, a deep bass hit on every cut, a sewing-machine rhythm, a whoosh on the spin, a warm low beat. No voice.
```

7. Settings and credit costs on Higgsfield

Step	Model	Settings	About
Product photo	Nano Banana Pro or GPT Image 2.6	9:16 or 3:4, 2K, High, 1 image	2-3 credits
Video	Seedance 2.5, Omni Reference	9:16, 10 s, Draft 480p, audio on	~30 credits
Final upscale (optional)	Same draft	Finalize to 1080p	only if you post it full screen

Credit costs can change: always check the price shown before you press Generate.

8. Checklist before you press Generate

- ☐ My product photo is sharp and the logo (if any) is clearly visible.
- ☐ The prompt has all the blocks, in order.
- ☐ There is one clear metaphor in the first second.
- ☐ The physics rules say what must NOT exist yet.
- ☐ No shot is longer than 0.6 seconds, and the ending is in motion.
- ☐ No readable text, letters or logos are requested in the video.
- ☐ Draft 480p, 1 generation, price checked.

Your turn.
