FREE PROMPT · FOOTBALL JERSEY AI AD

FROM THREAD TO JERSEY IN 10 SECONDS

The prompt and settings behind my football jersey ad: crest embroidery, collar stitching, heat press, film peel and the final reveal on a mannequin. Made with Seedance 2.5 on Higgsfield.

🎁 **50% off Higgsfield** with my link:

What you need

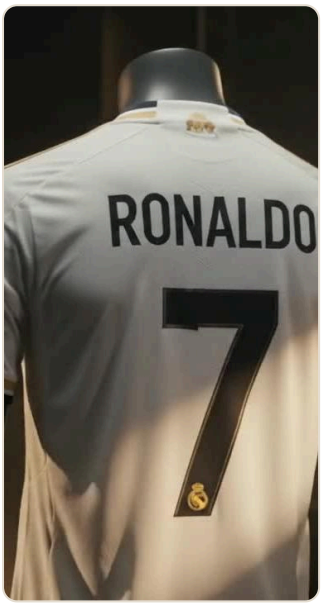

Step	Tool	Settings	About
1. Jersey photo	Higgsfield → Image → GPT Image 2.6	3:4, High, 2K, 1 image	~3 credits
2. Video	Higgsfield → Video → Seedance 2.5, Omni Reference	16:9 or 9:16, 10 s, Draft 480p, audio on	~30 credits
3. Edit	CapCut or any editor	Cut frozen frames, raise volume	free

Credit costs can change: always check the price before you press Generate.

The idea

The jersey is built in front of the camera, step by step, exactly like in a real kit factory: the crest is embroidered, the collar is sewn, the name and number are heat-pressed, the film is peeled, and the finished jersey turns on a mannequin under golden light. Real craft only, so it looks filmed, not rendered.

1 The jersey photo

Generate a clean, sharp jersey on a plain background. This is what keeps the jersey identical in every shot.

- **Use your own crest and sponsor.** Real club logos and player names are trademarks: avoid them for client work and ads.
- Keep printed words short (one word). AI can misspell long text.
- Generate **1 image**, not 2 or 4.

```
Premium e-commerce product photograph, vertical 3:4. A white football home jersey in lightweight technical knit with a fine engineered mesh texture, laid flat and symmetrical, front view. A round embroidered club crest on the left chest in gold and navy thread, raised and detailed. Gold collar trim and gold cuff trims, three thin navy stripes on each shoulder. A black printed sponsor word "NADIR" across the chest. Clean side seams and a slightly curved hem.

Real detail: visible mesh knit texture, raised embroidery with individual threads, crisp edges on the printed sponsor, natural soft folds in the fabric.

Light grey seamless studio background, soft large key light from the upper left, gentle natural shadow under the jersey. Shot on medium format, 80mm, f/8, true-to-life colour. Photographed, not rendered. No people, no hanger, no real brand logos, no other text.
```

2 The video prompt

Seedance 2.5 → **Omni Reference**. Upload the jersey photo: it is **@image1** in the prompt. Replace the colours and details in [REFERENCES] with your jersey.

```
[REFERENCES]
@image1 - the product: a white football home jersey in lightweight technical knit with a fine mesh
texture, a round embroidered crest on the left chest in gold and navy thread, gold collar and cuff trims,
three thin navy stripes on each shoulder, a black printed sponsor word on the chest, and a black name and
number on the back. Match the reference jersey exactly in every shot: colours, crest position and size,
trims and print. No redesign.

[HOOK RULE - THE CREST IS BORN - MANDATORY]
The film opens on an extreme macro of an industrial multi-needle embroidery machine stitching the crest
onto bare white fabric. The crest builds thread by thread, gold and navy, while the camera orbits the
needles.

[PHYSICS RULES - MANDATORY]
Real craft, strict order: embroider the crest, sew the collar trim, heat-press the name and number, peel
the transfer film, reveal. Ahead of the needles the fabric is bare; thread appears only behind them. The
heat press lowers, presses and lifts with real weight. The transfer film peels off in one smooth pull,
leaving the print behind. The jersey never changes colour or design. Nothing appears from nowhere.

[LOGO TIMING - MANDATORY]
@image1 shows the FINAL result only. Before 2.0s the crest does not exist yet: the fabric starts bare. The
name and number do not exist on the back before the heat press lifts at 5.6s.

[MOTION RULES - MANDATORY]
Nothing is ever still. Camera AND product move in every shot: orbits, push-ins, whip pans, rack focus,
snap zooms. No shot longer than 0.7 seconds. Hard cuts on every beat, speed ramps. The film ends in
motion.

[LOOK]
Real footage, not CGI: 35mm, macro lenses, warm workshop light, deep shadows, golden light beams in the
final scene, fine grain, true colour.

[SHOT LIST - 10 SECONDS]
0.0-0.6s - snap zoom: embroidery needles punch bare white fabric, the first gold thread appears.
0.6-1.3s - macro orbit around the needles; the crest fills in gold and navy, thread only behind the
needles.
1.3-2.0s - whip pull-out: the finished crest on the left chest, exactly as @image1.
2.0-2.7s - a sewing machine attaches the gold collar trim, the presser foot feeding the fabric.
2.7-3.4s - FPV glide along the navy shoulder stripes.
3.4-4.1s - the name and number laid on the back of the jersey, the camera tracking down.
4.1-4.8s - the heat press slams down, steam rising.
4.8-5.6s - the press lifts; a hand peels the transfer film in one smooth pull, revealing the print.
5.6-6.3s - macro glide across the printed number, rack focus to the crest.
6.3-7.0s - the jersey is lifted and slipped onto a mannequin, fabric rippling.
7.0-8.0s - dark room, golden light beams: the mannequin rotates, the camera orbiting the opposite way.
8.0-9.0s - push-in on the name and number on the back, light sweeping across them.
9.0-10.0s - fast 180-degree orbit to the front, landing on the crest while still moving.

[SOUND]
Embroidery machine rhythm, a sewing machine, the heat press hiss and thump, film peeling, a deep bass hit
on every cut, a stadium crowd swelling softly at the end. No voice.

[QUALITY CONSTRAINTS]
No melted or misspelled letters, no extra stripes, no crest in the wrong position, no colour changes, no
warped hands, no face. Keep every printed letter sharp and identical to @image1.
```

Why this prompt works

The logo does not exist yet

The reference photo shows the finished jersey. Without [LOGO TIMING] the model puts the finished crest on screen from the first frame, and the needles look like they are sewing over it.

Real craft in a strict order

Embroider, sew, press, peel, reveal. Each step is something a real factory does, so the viewer believes it.

The heat press has weight

Describing how the press lowers, presses and lifts gives the shot a physical punch, and the film peel is the satisfying reveal.

Never static

No shot longer than 0.7 seconds, and the film ends with a fast orbit landing on the crest while the camera is still moving.

Protect the letters

[QUALITY CONSTRAINTS] asks for sharp, identical letters. If a letter still melts in one shot, cut that shot in editing instead of paying for a new generation.

3 Edit like a pro

- Watch the clip in slow motion and cut frozen or broken frames (0.3-0.5 seconds are never noticed).
- Raise the volume: AI videos come out quiet. Add a stadium chant or a trending sound underneath.
- 16:9 video? Put it in the "prompt format": white vertical page, the video on top, the product photo and the prompt scrolling underneath.

Make it yours

- Swap the jersey for a hoodie, a cap or a tracksuit: keep the same structure (build it, press it, reveal it).
- Change the final world: a stadium tunnel, a locker room, a pitch at night.
- Keep [MOTION RULES], [PHYSICS RULES] and [LOGO TIMING] as they are.

Your turn.
