What you need

Step	Tool	Settings	About
1. Bag photo	Higgsfield → Image → GPT Image 2.6	3:4, High, 2K, 1 image	~3 credits
2. Video	Higgsfield → Video → Seedance 2.5, Omni Reference	9:16, 10 s, Draft 480p, audio on	~30 credits
3. Edit	CapCut or any editor	Cut frozen frames, raise volume	free

Credit costs can change: always check the price before you press Generate.

The idea

The bag is born from one thread and comes alive. A needle punches the leather on the beat like a **heartbeat**, and that rhythm drives every cut: the knife, the stripe, the clasp, the chain, the reveal on marble, and the final moment in a steel elevator. Real craft, filmed like a trailer. Nothing magic, so it looks filmed, not rendered.

1 The bag photo

Generate the product first. A clean, sharp photo on white is what keeps the bag identical in every shot of the video.

- **No real brand logos or monograms.** They get distorted by AI and can get your generation blocked.
- Generate **1 image**, not 2 or 4.

```
Luxury e-commerce product photograph, vertical 3:4. A structured top-handle bag in ivory-cream pebbled calfskin, front flap quilted with diagonal chevron topstitching, a slim dark brown edge piping on every edge. A single vertical woven stripe in navy and cream runs down the centre of the flap. On the stripe, a smooth round polished gold clasp shaped like a simple ring, with no letters and no logo. A rounded ivory leather top handle on gold rings, and a heavy polished gold curb chain shoulder strap with an ivory leather shoulder pad.

Real detail: visible leather pebble grain, even chevron stitching, clean dark edge paint, the woven texture of the stripe, gold links with believable weight, micro scratches and crisp reflections.

Pure white seamless background, soft large key light from the upper left, gentle natural shadow under the bag. Shot on medium format, 100mm macro lens, f/8, true-to-life colour. Photographed, not rendered. No people, no flowers, no props, no text, no logos anywhere.
```

2 The video prompt

Seedance 2.5 → **Omni Reference**. Upload the bag photo: it is **@image1** in the prompt. 9:16, 10 seconds, Draft 480p, audio on.

```
[REFERENCES]
@image1 - the product: a structured top-handle bag in ivory-cream pebbled calfskin. The front flap is
quilted with diagonal chevron topstitching and edged with slim dark brown piping. A vertical woven stripe
runs down the centre of the flap: two navy bands with a cream band between them. On the stripe sits an
open round polished gold ring clasp mounted on a small ivory leather tab. A rounded ivory leather top
handle is attached with gold rings. A heavy polished gold curb chain shoulder strap with an ivory leather
shoulder pad. Match the reference bag exactly: silhouette, proportions, stripe, stitching and hardware
count in every cut. No logo, no monogram, no letters. No redesign.

[HOOK RULE - THE HEARTBEAT - MANDATORY]
The bag is born from one thread and comes alive. The film opens on an extreme macro of a sewing needle
piercing bare ivory leather, and every needle punch lands on the beat like a heartbeat. The rhythm of the
needle becomes the rhythm of the whole film: every cut, every swing of the chain, every clasp snapping
shut lands on the same beat.

[PHYSICS RULES - MANDATORY]
Real craft, strict order: cut the leather, stitch the chevrons, attach the stripe, attach the hardware,
reveal the bag. Ahead of the needle the leather is unstitched; the thread appears only behind it, line by
line. A leather knife cuts along a marked line. Rings and clasps close only after they are aligned. Chain
links stay connected and swing with real weight and gravity. The strap never stretches or changes length.
The bag keeps the same colour, shape, stripe and hardware for the whole film. Nothing appears from
nowhere.

[MATERIAL STUDY]
Pebbled calfskin grain resolved in macro, even chevron stitching, clean dark edge paint, the woven texture
of the navy and cream stripe. Gold links with believable weight, micro scratches and crisp reflections.
Texture stays stable as focus and camera change.

[MOTION RULES - MANDATORY]
Nothing is ever still, not for a single frame. Every shot has camera motion AND product motion at the same
time: orbits, push-ins, whip pans, crane moves, rack focus, snap zooms. No shot longer than 0.6 seconds.
Hard cuts on every beat with speed ramps: fast in, slow at the peak, fast out. Whip-pan and match-cut
transitions. No slow drifts, no pauses, no settling, no holds. The film ends in motion.

[CAMERA & LENSES]
100 mm macro for needle, leather, stitching and metal. 85 mm for the full bag. 50 mm editorial for the
final scene. Natural perspective, realistic depth of field, no exaggerated distortion.

[LOOK]
Real footage, not CGI: 35mm film, soft directional window light in the atelier, narrow specular highlights
on gold without clipping, warm ivory and cream tones against deep blacks, fine grain, true colour.

[SHOT LIST - 10 SECONDS]
0.0-0.5s - snap zoom: the needle punches bare ivory leather on the first beat.
0.5-1.2s - macro orbit around the needle; a chevron line of stitching appears only behind it.
1.2-1.8s - a leather knife racing along a marked curve, the edge opening clean.
1.8-2.4s - FPV glide along the chevron stitching, rack focus to the dark brown edge piping.
2.4-3.0s - the woven stripe, two navy bands and a cream band, pressed down the centre of the flap, the
camera tracking with it.
3.0-3.5s - the gold ring clasp on its leather tab snaps into place on the stripe in extreme macro, on the
beat.
3.5-4.1s - the gold curb chain is lifted and swings toward the lens, links catching light.
4.1-4.6s - barrel roll around the gold rings of the top handle.
4.6-5.2s - whip pan down the chain onto the ivory leather shoulder pad.
5.2-6.0s - the finished bag rotates on a black marble plinth under a single top light, the camera orbiting
the opposite way.
6.0-6.7s - push-in through the rotation onto the gold ring clasp, specular flash.
6.7-7.4s - match cut on the swinging chain: hard cut to a brushed stainless-steel elevator.
7.4-8.3s - the bag swings onto the shoulder of a woman in black, cropped from the chin down, the chain
```

swinging with her step.
8.3-9.1s - macro orbit around the chain and clasp as she moves, steel reflections sliding past.
9.1-10.0s - the elevator doors begin to close while the camera pushes in on the bag, still moving.

[SOUND]
A needle punch on every beat like a heartbeat, a leather knife cut, a sharp metallic click for every clasp, the chain swinging and chiming, a deep hit on every cut, an elevator chime at the end. No voice.

[QUALITY CONSTRAINTS]
No extra chain, missing clasp, floating hardware or distorted silhouette. No melting leather, plastic-looking surfaces, impossible reflections, warped hands or inconsistent stitching. The stripe always has two navy bands and one cream band. No logos, titles, captions or letters inside the footage. No face: the woman is always cropped from the chin down.

Why this prompt works

Every detail is described, then locked

The stripe is "two navy bands with a cream band between them", not just "a stripe". The model has nothing to guess, and [QUALITY CONSTRAINTS] repeats it so it never changes.

Real craft in a strict order

Cut, stitch, stripe, hardware, reveal. The thread appears only behind the needle. This is what makes it look like a real atelier film instead of 3D.

No shot longer than 0.6 seconds

Constant camera and product motion, and the film ends with the elevator doors closing while the camera is still moving. No frozen ending.

Lenses per scene

100 mm macro for materials, 85 mm for the bag, 50 mm for the final scene. Naming the lens gives you a consistent, photographic look.

No face

The woman is always cropped from the chin down. Faces are where AI breaks most often, and it keeps the bag as the hero.

3 Edit like a pro

- Watch the clip in slow motion. If a shot freezes (it happens, often at the start), add a slow push-in on it or cut 0.3-0.5 seconds.
- AI videos come out quiet: raise the volume.
- Post it in the "prompt format": the video on top, the product photo and the prompt scrolling underneath. People save it to copy the prompt.
- Add a trending sound under the original audio at 30-40%.

Make it yours

- Swap the bag: describe yours in [REFERENCES] and [QUALITY CONSTRAINTS] with every detail.
- Swap the world: a rooftop at night, a gallery, a train station. Keep one final scene that ends in motion.
- Keep [MOTION RULES], [PHYSICS RULES] and [CAMERA & LENSES] exactly as they are.

Your turn.
